Anything inside this line is in the
safe zone

Bleed has been
cut away and
discarded

What is bleed?

The industry standard is to have 3mm of bleed on each edge and a 3mm safe zone inside.

This means that the length of each side will be 6mm longer.

For example an 148mm x 148mm Leaflets when lined up correctly with bleed will be 154mm x 154mm. It will then be cut down to its finished size of 148mm x 148mm.

What is the safe zone?

The safe zone is the 3mm inside of the cutting edge in which no text or important information should be placed.

Any graphics in this area risk being clipped when cutting.
