All Fonts: Outlined, Converted to Curves or Embedded

Bleed: 3mm

Safe Zone: 3mm

No printer marks - we will put our own on for printing

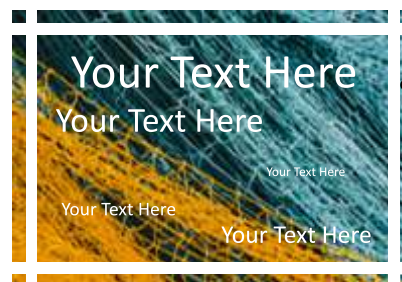

Before cutting

GREEN LINE

Anything inside this line is in the safe zone

After cutting

Bleed has been cut away and discarded

What is bleed?

The industry standard is to have 3mm of bleed on each edge and a 3mm safe zone inside.

This means that the length of each side will be 6mm longer.

For example an 148mm x 148mm Leaflets when lined up correctly with bleed will be 154mm x 154mm.

It will then be cut down to its finished size of 148mm x 148mm.

What Is the safe zone?

The safe zone is the 3mm inside of the cutting edge in which no text or important information should be placed.

Any graphics in this area risk being clipped when cutting.
